Profile

Computer Science graduate with industry experience in backend software engineering and cloud-based application development. Experienced in developing production-level software, building REST APIs and microservices, working with databases, and collaborating with frontend and QA teams in Agile environments. Hands-on experience with authentication, API workflows, notifications, payment integrations, and production issue resolution. Familiar with software design principles, system integration, version control, CI/CD workflows, and cloud deployment practices.

Education

University of Colombo, School of Computing, BSc in Computer Science — May 2023 - Sept 2026

J/Vembadi Girl's High School, AAB (Combined Mathematics, Chemistry, Physics) — Jan 2013 - Oct 2022

Professional Experience

Protonest IoT (Pvt) Ltd

Associate Software Engineer — Apr 2026 - Present

- Completed **Phase 1 and Phase 2** development of the SoftKey IoT platform, contributing to backend functionality, business logic, and system enhancements.
- Implemented **Stripe** subscription and payment workflows, including subscription migration, invoice generation, payment processing, and webhook integration.
- Maintained and updated existing **AWS ECS** deployments to support new phase releases and application changes.
- Troubleshot and resolved backend, database, integration, and deployment issues across development, QA, and production environments.
- Led the deployment of Protonest Connect – Intel4 Factory on **AWS EC2**, configuring the application environment and supporting the production rollout.
- Contributed to the **NAPCO** project by providing technical guidance to a software engineering intern and reviewing implementation against business requirements.

Software Engineering Intern — Oct 2025 - Apr 2026

- Built and enhanced backend services for IoT-based digital access systems using Spring Boot, REST APIs, PostgreSQL, and microservices architecture.
- Deployed and supported the application across Azure development environments and AWS development, QA, and production environments.
- Containerized backend services using Docker and supported deployments on AWS ECS Fargate, configuring **Amazon RDS** for database hosting and **Amazon CloudWatch** for application and infrastructure monitoring.
- Troubleshot backend, database, integration, and deployment issues across development and QA environments.

Alphintra (Pvt) Ltd (Part-Time)

Software Engineer — Aug 2026 - Present

- Contribute to the **Brainweber** project, developing educational video decks focused on human body parts.
- Use **Claude-based AI prompting workflows** to assist in generating and structuring content for video deck development.
- Provide technical guidance and task support to two software engineering interns working under the project.
- Contribute to maintaining development quality and following structured software engineering practices.

Technical Skills

Programming Languages: Java, JavaScript (ES6+), Python, SQL

Front-End: React, Next.js, HTML5, CSS3, Tailwind CSS

Back-End: Spring Boot, REST APIs, JWT Authentication and Authorization, Spring Security

Databases: MySQL, PostgreSQL, MongoDB

Cloud & DevOps: AWS (EC2, ECS Fargate, RDS, CloudWatch), Microsoft Azure, GitHub Actions, CI/CD Pipelines

Architecture & Concepts: Microservices Architecture, MVC, Client–Server Architecture, API Security, Role-Based Access Control

Developer Tools: GitHub, Docker, VS Code, Eclipse, Postman

Personal Projects

Authentication and Authorization Microservice | Spring Boot, Spring Security, JWT, PostgreSQL, REST APIs
GitHub - github.com/Microservice-authenication-authorization

- Developed a backend authentication and authorization service using Spring Boot and RESTful APIs.
- Implemented user registration, login, password hashing, and JWT-based authentication.
- Integrated PostgreSQL for persistent user data storage and implemented role-based access control.

Three-Tier Application Deployment Using Docker and Kubernetes | Docker, Docker Compose, Kubernetes (K3s), Nginx
GitHub - github.com/Three-tier-docker-k8s

- Containerized a three-tier application consisting of a React frontend, Node.js REST API, and MongoDB database.
- Configured Docker Compose to run and connect application services in a containerized environment.
- Deployed and orchestrated containers on AWS EC2 using Kubernetes (K3s), with Deployments, Services, and Ingress for application access and service communication.

Personal Portfolio Deployment on AWS EC2 | AWS EC2, Linux, Docker, GitHub Actions, CI/CD
GitHub - github.com/EC2-portfolio

- Deployed a personal portfolio website on AWS EC2 using Linux and configured Nginx to serve the application.
- Implemented a CI/CD pipeline using GitHub Actions to automate application build and deployment to the EC2 instance.
- Configured EC2 security groups and networking to control external access to the application.

Certifications

- LinkedIn - Spring Boot 3 Essential Training
- LinkedIn - AWS Essential Training for Developers
- LinkedIn - Docker Foundations Professional Certificate
