Profile

Computer Science graduate with industry experience in backend software engineering and cloud-based application development. Experienced in building REST APIs and microservices, integrating payment workflows, working with relational databases, and supporting production deployments. Hands-on experience with Spring Boot, PostgreSQL, Docker, AWS, Azure, CI/CD workflows, and application troubleshooting

Education

University of Colombo, School of Computing, BSc in Computer Science — May 2023 - Sept 2026

J/Vembadi Girl's High School, AAB (Combined Mathematics, Chemistry, Physics) — Jan 2013 - Oct 2022

Professional Experience

Protonest IoT (Pvt) Ltd

Associate Software Engineer — Apr 2026 - Present

- Delivered Phase 1 and Phase 2 of the SoftKey IoT platform, enhancing backend functionality, business logic, and digital access features.
- Developed the Stripe subscription and payment integration, covering subscription migration, invoice generation, payment processing, and webhook handling.
- Maintained and updated existing AWS ECS deployments to support application changes and new phase releases.
- Led the AWS EC2 deployment and production rollout of Protonest Connect – Intel4 Factory.
- Diagnosed and resolved backend, database, integration, and deployment issues across development, QA, and production environments.
- Guided a software engineering intern on the NAPCO project and reviewed implementation work against business requirements.

Software Engineering Intern — Oct 2025 - Apr 2026

- Developed and enhanced 50+ API endpoints for IoT-based digital access systems using Spring Boot, REST APIs, PostgreSQL, and microservices architecture.
- Contributed to the development and maintenance of four backend microservices.
- Containerized backend services using Docker and supported AWS ECS Fargate deployments, Amazon RDS database hosting, and Amazon CloudWatch monitoring.
- Deployed and supported applications across Microsoft Azure development and AWS development, QA, and production environments.
- Investigated and resolved application and integration issues to support QA activities.

Alphintra (Pvt) Ltd (Part-Time)

Software Engineer — Aug 2026 - Present

- Develop educational video decks focused on human anatomy for the Brainweber project.
- Use Claude-based AI prompting workflows to generate and organize educational content.
- Provide technical guidance and task support to two software engineering interns.

Technical Skills

Programming Languages: Java, JavaScript (ES6+), Python, SQL

Front-End: React, Next.js, HTML5, CSS3, Tailwind CSS

Back-End: Spring Boot, REST APIs, JWT Authentication and Authorization, Spring Security

Databases: MySQL, PostgreSQL, MongoDB

Cloud & DevOps: AWS (EC2, ECS Fargate, RDS, CloudWatch), Microsoft Azure, GitHub Actions, CI/CD Pipelines

Architecture & Concepts: Microservices Architecture, MVC, Client–Server Architecture, API Security, Role-Based Access Control

Developer Tools: GitHub, Docker, VS Code, Eclipse, Postman

Personal Projects

Authentication and Authorization Microservice | Spring Boot, Spring Security, JWT, PostgreSQL, REST APIs
GitHub - github.com/Microservice-authenication-authorization

- Built a backend authentication and authorization service using Spring Boot and RESTful APIs.
- Added user registration, login, password hashing, and JWT-based authentication.
- Integrated PostgreSQL for persistent user data and configured role-based access control.

Three-Tier Application Deployment Using Docker and Kubernetes | Docker, Docker Compose, Kubernetes (K3s), Nginx
GitHub - github.com/Three-tier-docker-k8s

- Containerized a three-tier application comprising a React frontend, Node.js REST API, and MongoDB database.
- Configured Docker Compose to run and connect application services in a containerized environment.
- Deployed and orchestrated containers on AWS EC2 using Kubernetes (K3s), with Deployments and Services.

Personal Portfolio Deployment on AWS EC2 | AWS EC2, Linux, Docker, GitHub Actions, CI/CD
GitHub - github.com/EC2-portfolio

- Deployed a personal portfolio website on AWS EC2 using Linux and configured Nginx to serve the application.
- Created a GitHub Actions CI/CD pipeline to automate application build and deployment to EC2.
- Configured EC2 security groups and networking to control external access.

AWS-S3 Cloud document management | Node.js, Express, React, MongoDB, AWS S3, Docker
GitHub - github.com/AWS-S3

- Developed REST APIs for document upload, listing, download, and deletion.
- Integrated Amazon S3 for file storage and MongoDB for document metadata.
- Containerized the application using Docker Compose and configured Nginx for API routing.

Certifications

- LinkedIn - Spring Boot 3 Essential Training
- LinkedIn - AWS Essential Training for Developers
- LinkedIn - Docker Foundations Professional Certificate
